Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This CDS clone is a part of a collection of human full length expression clones generated by BD Biosciences Clontech and the Harvard Institute of Proteomics. Each CDS has been cloned in two forms: with and without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Pusion(TM) cloning system between the Sall and HindIII sites of the pDNR-DUAL vector. Additional sequences in the clone: 'ACC' after Sall site and before 'ATG' to provide Kozak consensus sequence; 'GG' after last codon and before HindIII site to maintain reading frame.

Direct Submission

Direct Submission

Submitted (31-MAY-2002) Wellcome Trust Sanger Institute, Hinxton, Submitted (31-MAY-2002) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. B-mail enquiries:
humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Jun 21, 2002 this sequence version replaced gi:18693024.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; SWI, SWISSPROT; Tr:, TREMBL; Wp:, WORMMPED; Information on the WORMMPED database can be found at

NOTE: This is a 'working draft' sequence. It currently consists of 29 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.

-I- CATALYTIC ACTUITY: Acetyl-CoA + H(2)O + acetoacetyl-CoA = (8)-3-hydroxy-3-methylglutaryl-CoA + CoA.
-I- PATHMAY: PRODUCTION OF MEVALONATE FROM HMG-COA PRIOR TO THE SYNTHESIS OF STEROLS SUCH AS CHOLESTEROL AND ISOPRENOIDS.
-I- SUBCELLULAR LOCATION: Cyroplasmic.
-I- SIMILARITY: Belongs to the HMG-COA synthase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       EMBL; X66435; CAA47061.1; -. "Nucleotide sequence of a rat liver cDNA encoding the cytosolic 3-
hydroxy-3-methylglutaryl coenzyme A synthase.";
Nucleic Acids Res. 18:3642-3642(1990).
-!- FUNCTION: This enzyme condenses acetyl-CoA with acetoacetyl-CoA to
form HMG-CoA, which is the substrate for HMG-CoA reductase.
-!- CATALYTIC ACTIVITY: Acetyl-CoA + H(2)O + acetoacetyl-CoA = (S)-3-
hydroxy-3-methylglutaryl-CoA + CoA.
-!- PATHWAY: PRODUCTION OF MENALONATE FROM HMG-COA PRIOR TO THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SEQUENCE FROM N.A.

Hydroxymethylglutaryl-CoA synthase, mitochondrial precursor
(EC 2.3.3.10) (HMG-CoA synthase) (3-hydroxy-3-methylglutaryl coenzyme
-i- FUNCTION: This enzyme condenses acetyl-CoA with acetoacetyl-CoA to form HMG-CoA, which is the substrate for HMG-CoA reductase.
-i- CATALYTIC ACTIVITY: Acetyl-CoA + H(2)O + acetoacetyl-CoA = (S)-3-hydroxy-3-methylglutaryl-CoA + CoA.
-i- PATHWAY: RESPONSIBLE, TOGETHER WITH HMG-COA LYASE FOR KETONE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FUNCTION: This enzyme condenses acetyl-CoA with acetoacetyl-CoA form HMG-CoA, which is the substrate for HMG-CoA reductase. CATALYTIC ACTIVITY: Acetyl-CoA + H(2)O + acetoacetyl-CoA = ($)-3 hydroxy-3-methylglutaryl-CoA + CoA. hydroxy-3-methylglutaryl-CoA + CoA. PATHWAY: RESPONSIBLE, TOGETHER WITH HMG-COA LYASE FOR KETONE BODY BIOSYNTHESIS.
SUBCELLULAR LOCATION: Mitochondrial.
TISSUE SPECIFICITY: Liver and kidney.
SIMILARITY: Belongs to the HMG-CoA synthase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               s SWISS-PROT entry is copyright. "Human mitochondrial HMG CoA synthase: liver cDNA and partial genomic cloning, chromosome mapping to 1p12-p13, and possible role in vertebrate evolution.";

vertebrate evolution.";

Genomics 23:552-559(1994).

-I- FUNCTION: This enzyme condenses acetyl-CoA with acetoacetyl-CoA to form HMG-CoA, which is the substrate for HMG-CoA reductase.

-I- CATALYTIC ACTIVITY: Acetyl-CoA + H(2)O + acetoacetyl-CoA = (S)-3-

hydroxy-3-methyl-glutaryl-CoA + CoA.

-I- PATHWAY: RESPONSIBLE, TOGETHER WITH HMG-COA LYASE FOR KETONE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-OCT-1996 (Rel. 34, Created)

                   FUNCTION: This enzyme condenses acetyl-CoA with acetoacetyl-CoA to form HMG-CoA, which is the substrate for HMG-CoA reductase. CATALYTIC ACTIVITY: Acetyl-CoA + H(2)O + acetoacetyl-CoA = (S)-3-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    135
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         384
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               375
